

Steps for eliminating roaches in conjoined eating establishments

	<p>1. Make sure all drains and grease traps are clean- inside and outside. Clean out the 'P' traps in the drain lines.</p>	<p>2. Do not allow standing water to remain on floors, counter tops, or in sinks.</p>	<p>3. Clean your kitchen. All countertops and equipment must be free from food debris and sanitized.</p>	<p>4. Never leave dirty dishes in the sink.</p>	<p>5. Clean and sanitize all surfaces on containers used for food and ingredient storage.</p>
<p>6. Sweep floors at the end of the day, then mop with a disinfectant cleaner and boiling hot water.</p>	<p>7. Keep all garbage out and keep trash cans clean.</p>	<p>8. Put down roach traps under sinks, in cabinets, along walls, behind equipment, etc. Monitor these traps and replace as needed.</p>	<p>9. Make sure the floor is as clear as possible and then spray for roaches the same day your neighbors spray for roaches.</p>	<p>10. Vacuum floor to eliminate dead bugs and eggs.</p>	<p>11. secure all outer door and window openings.</p>

Repeat the process until roaches are eliminated!
